Satin Cap Pattern and Printing Instructions

Printing

This pattern has been made to fit both Letter and A4 paper sheets.

Open the files using a pDF viewer. I recommend using Adobe reader or Adobe Acrobat for best results on either a Mac or PC computer.

Visit http://get.adobe.com/reader/, to download for free, Adobe reader.

Print the files making sure that the document is at 100%.
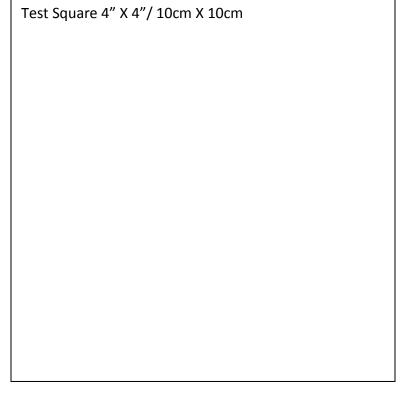

Pattern Grid measures: 10cm x 10cm / 4" x 4".

Please note: Page Scaling is usually on by default when printing and will print your pattern at the wrong size. Please make sure that Page scaling is disabled, by changing Page Scaling to none.
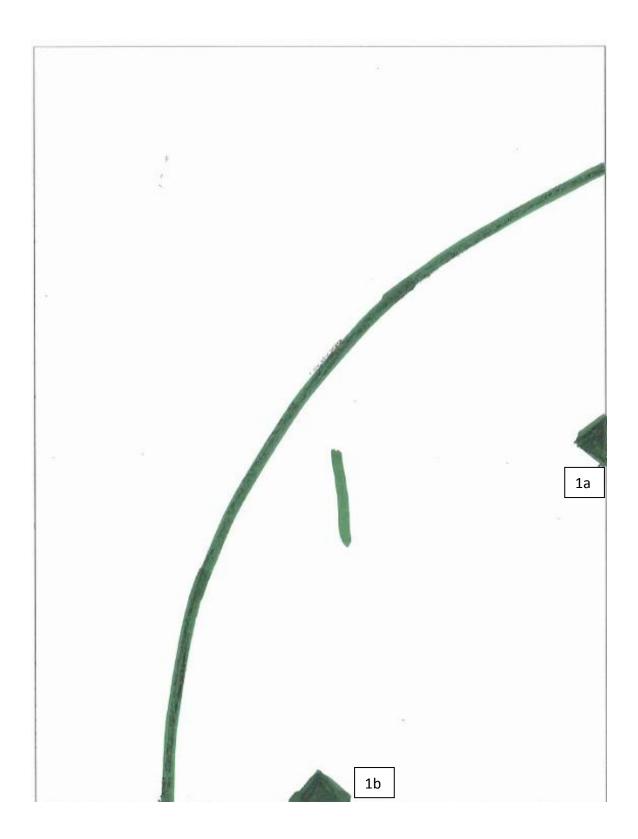

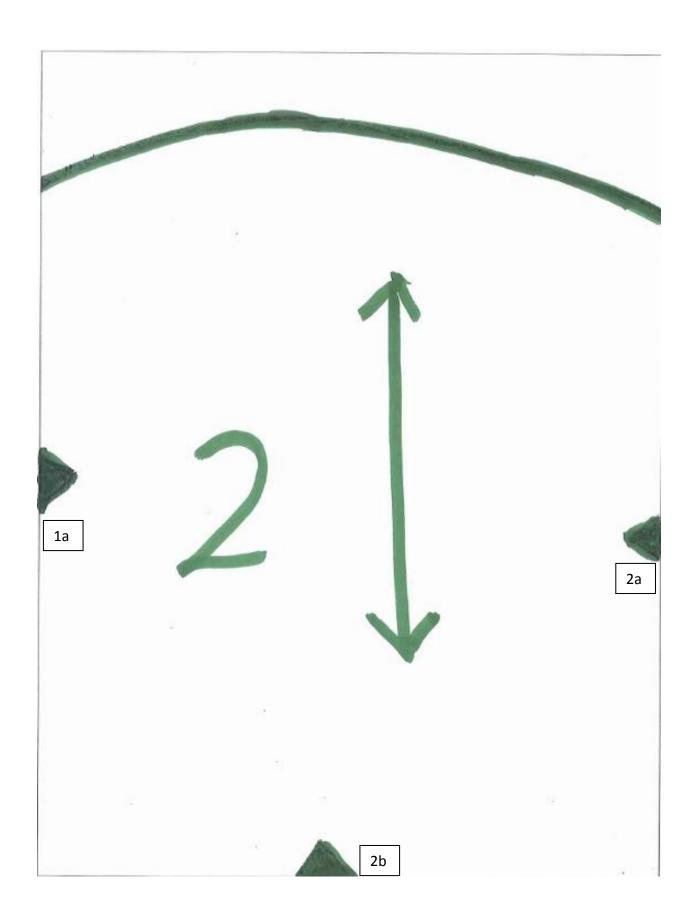

Assembly

Prepare the printed pattern sheets by trimming each sheet to the bounding box. To save time you can trim only the edges marked with scissor symbols.
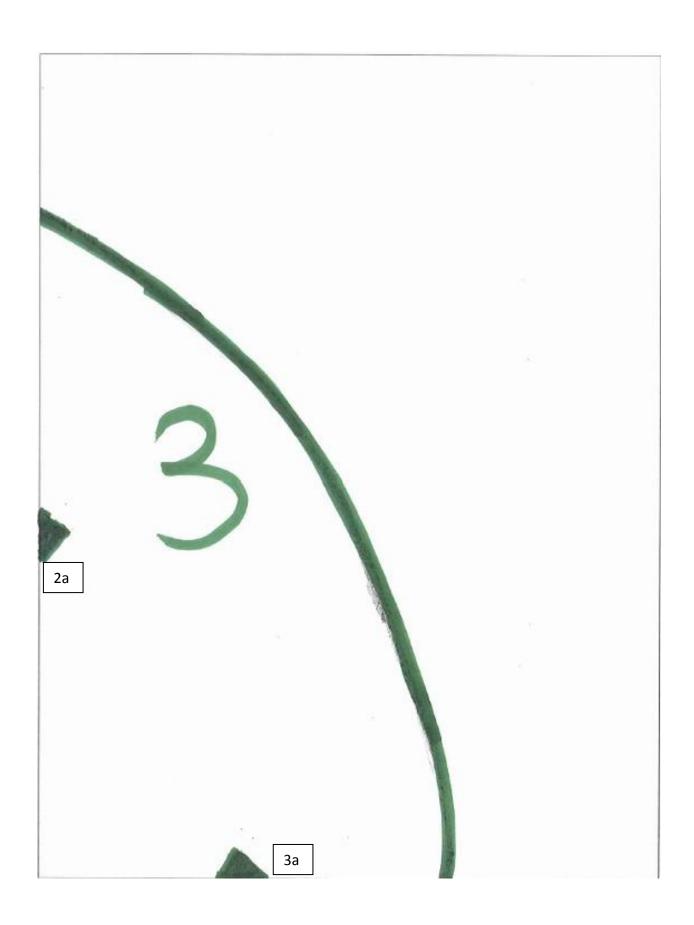

I recommend using a paper trimmer or a craft knife and ruler to trim the sheets.
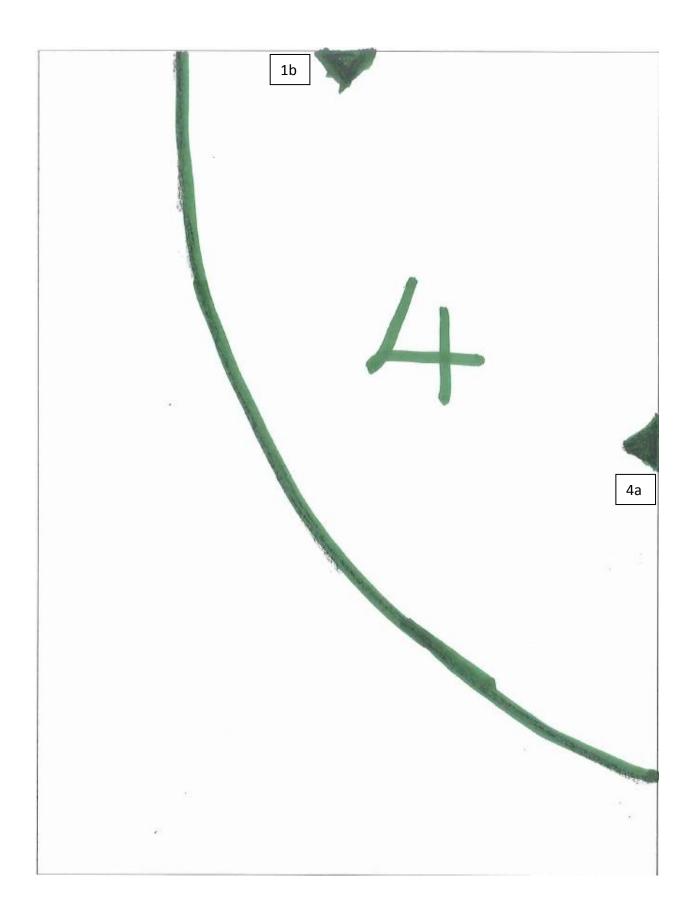

Each sheet is clearly marked and named with registration markers i.e.; 2a to be joined up with 2a. Align each printed sheet with the corresponding marker and grid lines, tape to secure.
